Coral IPx Office VoIP system named as 2005 Product of the Year
Internet Telephony Magazine (TMC) to feature Coral IPx Office in upcoming issues.

Internet Telephony Magazine (a TMC publication) announced that Tadiran Telecom's newly released **Coral IPx Office** was a 2005 Product of the Year award winner! Internet Telephony editor Greg Galitzine comments that this recognition provides a good "starting point for individuals seeking solutions that will help them achieve their goals, be it to save money, grow their business, or embrace the hottest telecommunications technology out there."

The **Coral IPx Office** is based on Tadiran's universal Voice over Internet Protocol (VoIP) architecture that allows the use of any standard Session Initiation Protocol (SIP) device. At the same time the system can connect to Tadiran's own FlexSEt IP feature-rich telephones and FlexIP soft-phones which use another popular VoIP protocol – MGCP. This provides organizations with the best of both worlds. SIP-based third-party devices such as video phone, soft phones (PC or PDA), and SIP trunks are supported by the **Coral IPx Office**.

One of the main drivers for VoIP is connecting multiple locations using a corporate WAN. The **Coral IP Office's** universal VoIP support also includes the networking of multiple systems. Each location with a **Coral IPx Office** provides users the ability to call another user at a remote location just as if they were at the same location.

The system can be scaled from a few users to a few hundred with its flexible "hot-insertion" card design. Tadiran Telecom products are available through their authorized Business Partners.

About Tadiran Telecom
An established innovator in telecommunications for more than 40 years, Tadiran Telecom is leading the convergence of today's technology with tomorrow's innovations, transforming the way people and businesses communicate, connect and collaborate.
